ParkIDx — One-Page Overview

Know instantly if a car belongs on your property. · parkidx.com/share

What is ParkIDx?

ParkIDx turns any phone into a private car-tag scanner for properties. Register resident vehicles once, then scan a license plate to confirm whether a car belongs on-site — instantly.

Who it's for

- Gated communities & HOAs
- Apartment complexes & property managers
- Parking enforcement & security teams
- Any property that needs to verify vehicles at the gate

The problem it solves

Gate staff often rely on paper lists or memory to decide who gets in. ParkIDx replaces guesswork with a fast, private, searchable vehicle database that works even without cell signal.

How it works

- 1. Register vehicles** — Add tag number, resident name, apartment/unit, address number, vehicle color, and tag state/city. Upload a spreadsheet to import many vehicles at once.
- 2. Invite staff** — Give scanners check-only access. They see only what you allow them to see.
- 3. Scan at the gate** — Point the camera at a plate or type the tag by hand. Results appear in under a second.

Key features

Camera & manual scanning — Scan plates in motion or enter tags by hand.

Full resident record — Tag, owner name, unit, address, color, state, and city on one result card.

Offline mode — Vehicle list is cached on the device so checks keep working in garages or dead zones.

Role-based access — Owners/admins manage the database; scanners can only verify vehicles.

Field-level privacy — Admins control which details scanners can view.

Unlimited rescans — Scan the same tag as many times as needed — the app reports registered or not registered.

Secure by default — Row-level security and encryption keep each organization's data private.

Drive-by scanning — Continuous capture helps catch plates while cars are moving.

Pricing

- 7-day free trial — no card required.
- \$50 / month — full access, unlimited members.
- \$400 / year — 33% discount vs. monthly.
- One owner subscription covers unlimited staff and scanners.

Security & reliability

- Encrypted organization data
- Row-level database security
- Owner-only access to the full vehicle list
- Scan diagnostics and reliability logging
- Automatic offline caching
